Cookies and Cream without the Cookies...

The Missing Ingredient for
Individualisation in a
Cookieless World

**The cookie is
crumbling.**

We already know that Google made a big move to **phase out third-party cookies**, finally catching up with other browsers.

Meanwhile, global privacy regulations like the **GDPR & CCPA** have changed how we collect and use personal data.

**But here lies the Great
Cookie Conundrum - how
will we provide valuable,
useful experiences without
this convenient way to
understand our customers?**

**After all, cookies
and cream without
the cookies is, just
plain vanilla.**

71% of buyers feel frustrated when a purchasing experience is impersonal.

**Nobody wants to slide
back into the 90s,
before ads spoke to
personal wants, needs,
and interests.**

It doesn't have to...

...because what I see is an opportunity to collect **data ethically**, to use it better, and do so in a way that customers are going to love.

The key is going to be moving from personalisation to individualisation.

Individualisation looks
at the customers as truly
unique... **individuals.**

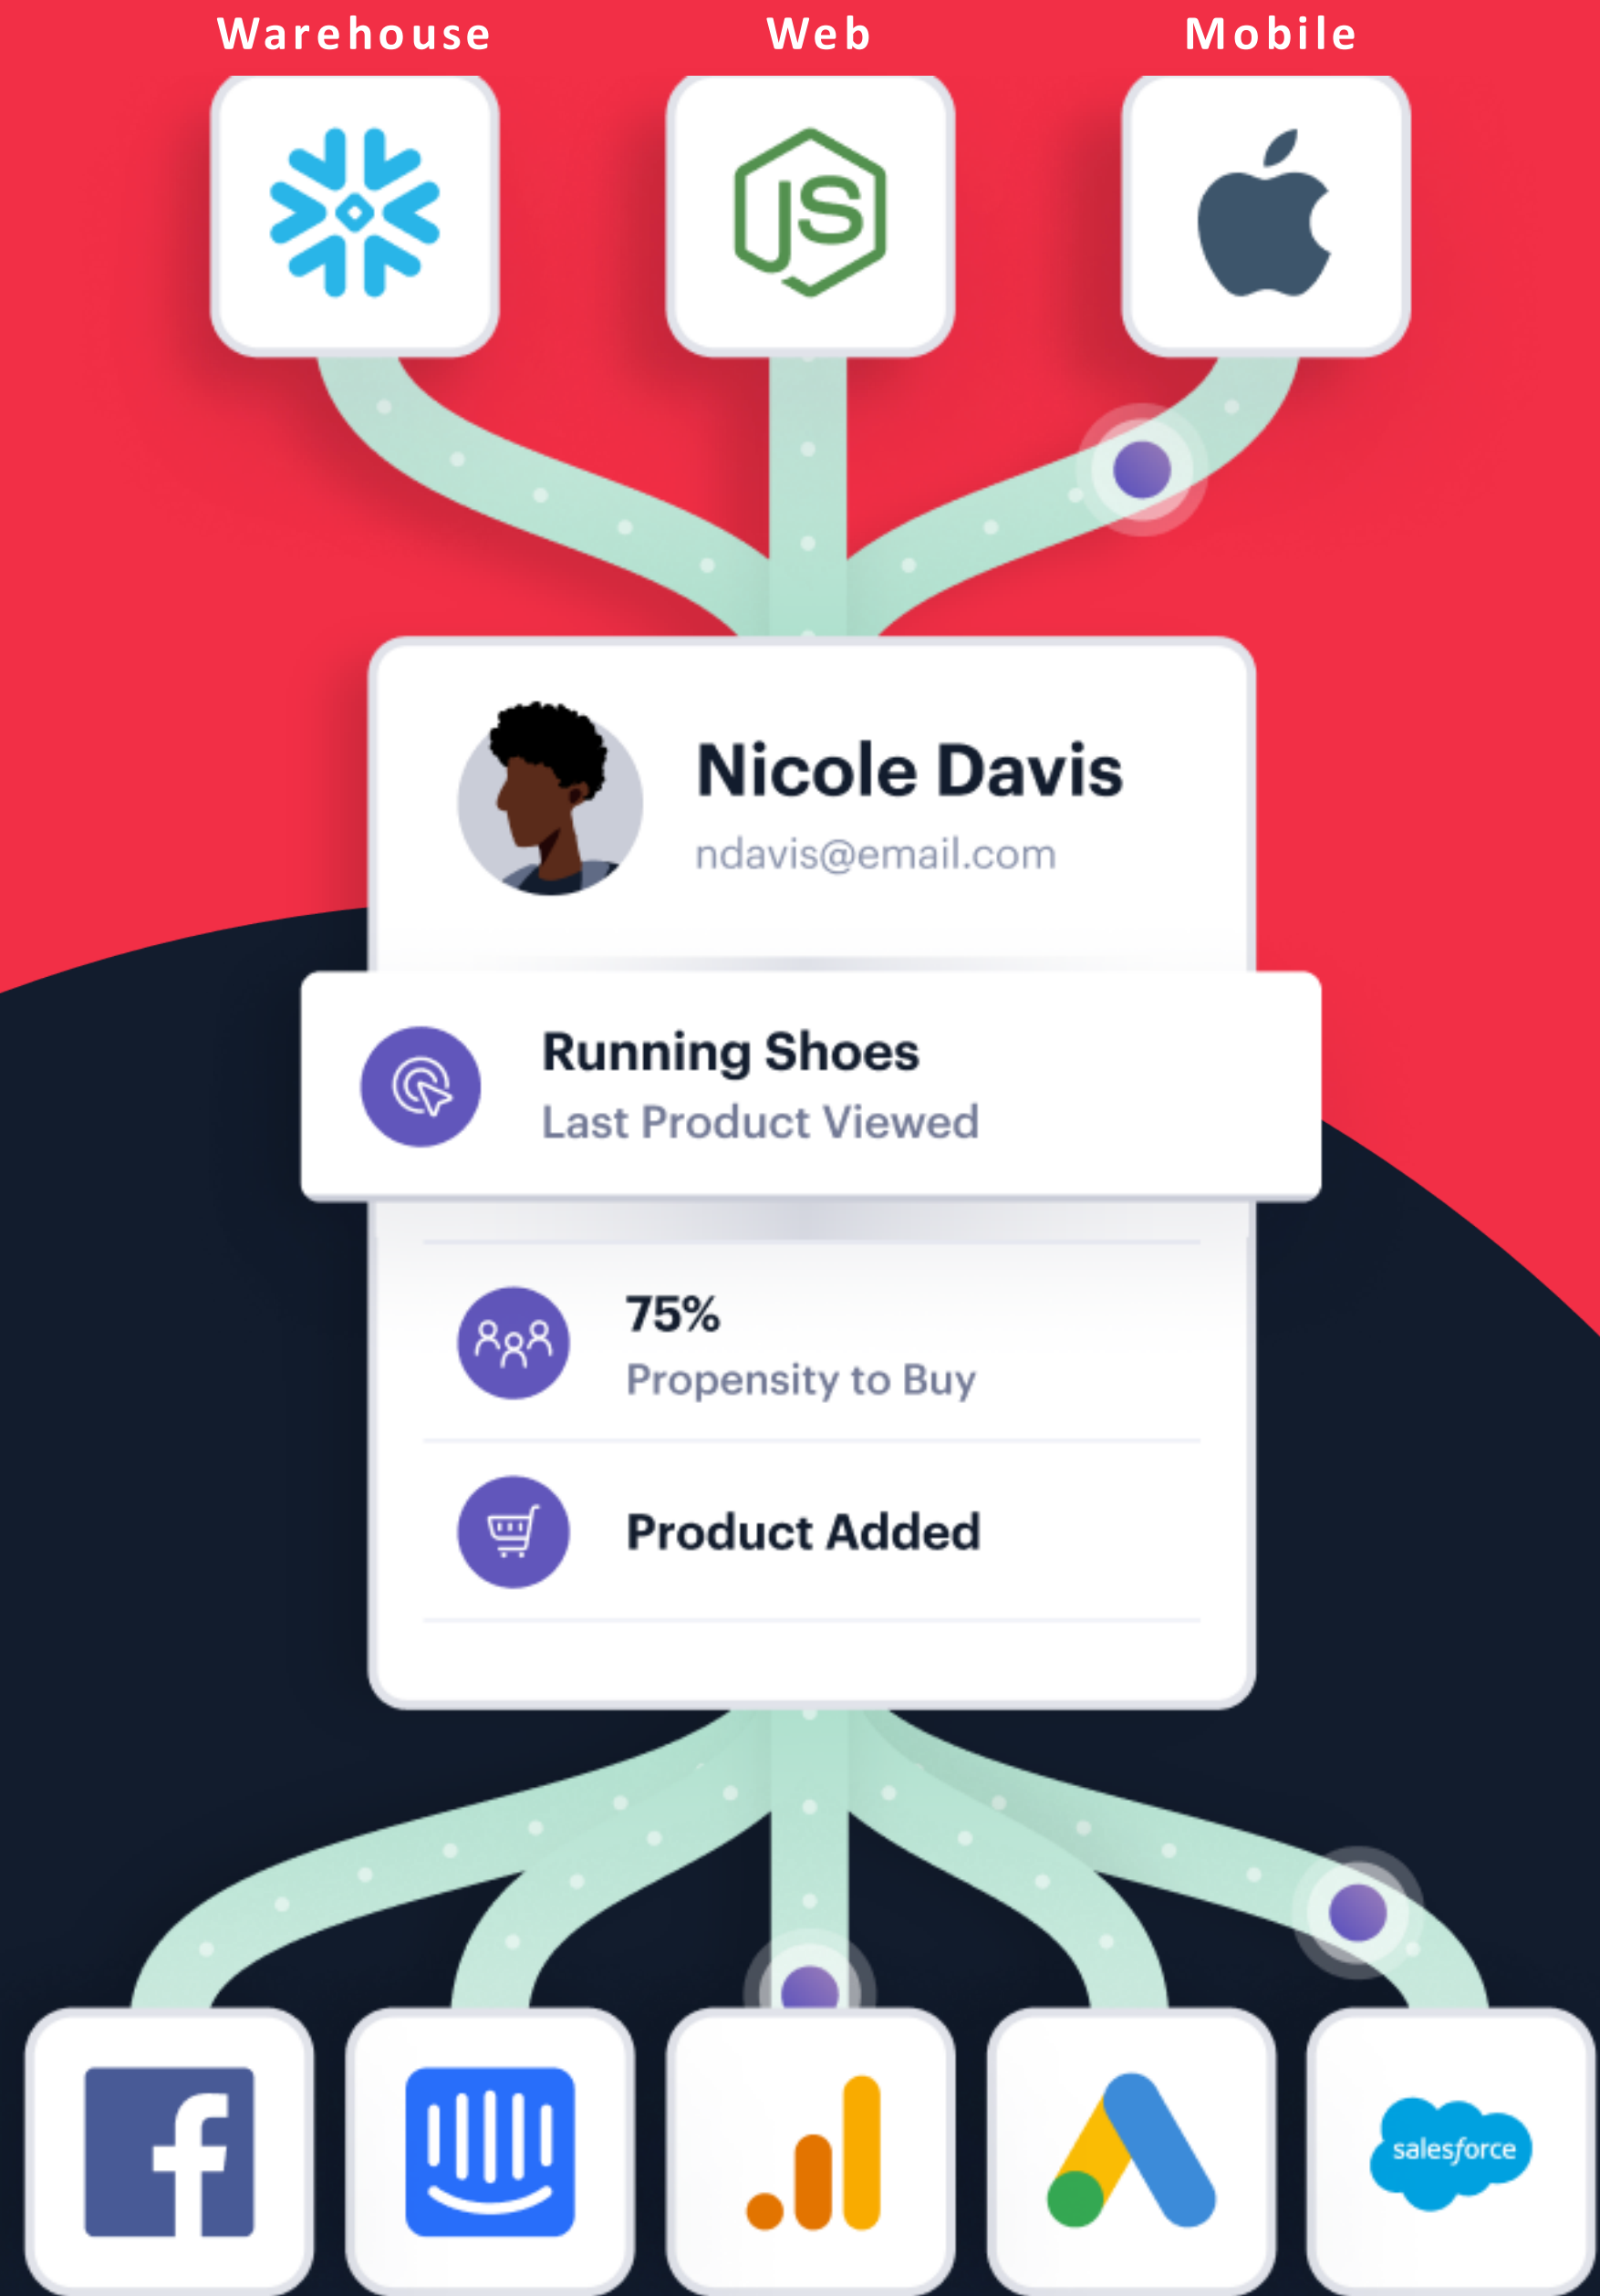

**It's our responsibility as the world's
#1 Customer Data Platform
provider to play an active role in
helping brands pull this off.**

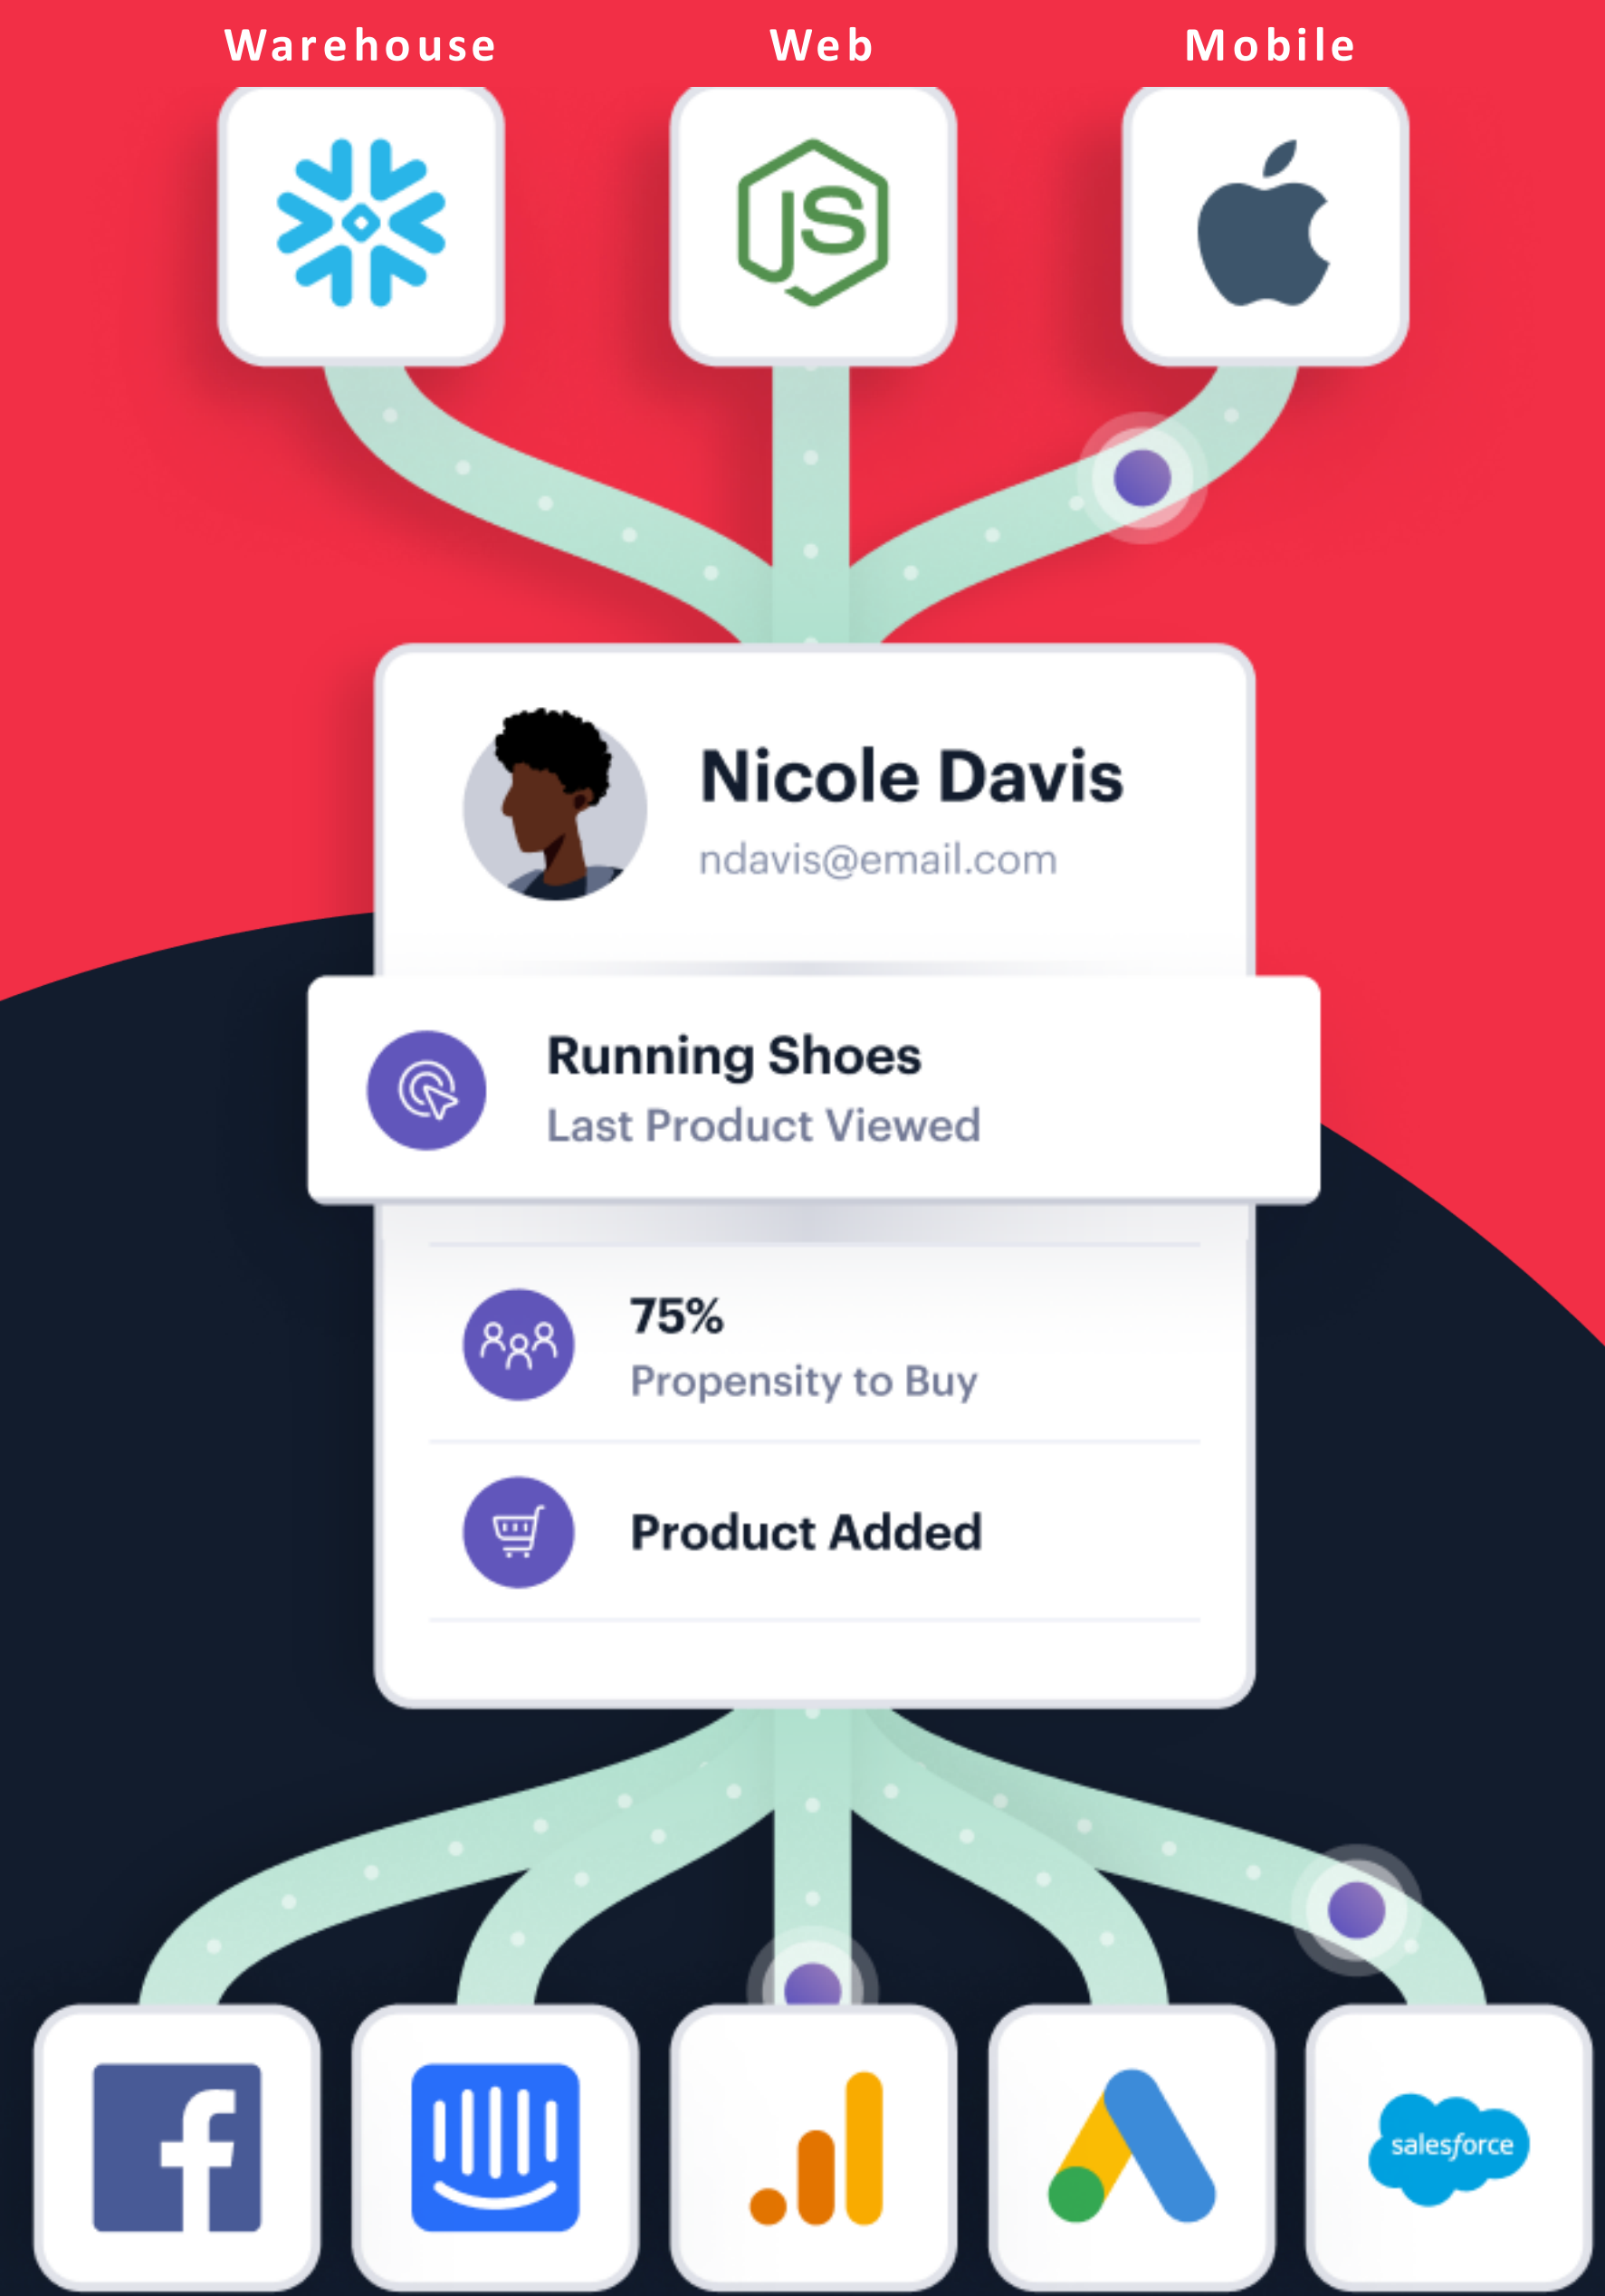

**Customer Data
Platforms** enable
you to collect and
organise first-party
data.

Omnichannel
customer identity
resolution helps
identify customers
across different
devices and
platforms.

By collecting data
from multiple sources
and linking it to
individual customer
profiles

An iceberg floating in dark water. The tip of the iceberg is visible above the surface, while the much larger, submerged part is hidden below. The water is dark and reflective, mirroring the sky. The iceberg's surface is textured and shows some cracks.

Gartner defines **dark data** as information organizations collect, process and store **but fail to use for other purposes** (e.g., analytics & business relationships etc.)

Source: Gartner;

An iceberg floating in dark water. The tip of the iceberg is visible above the surface, while the much larger, submerged part is hidden below. The water is dark and reflective, mirroring the sky. The iceberg's surface is textured and cracked.

CDP Solutions **help you manage all the dark data** you have captured in your operational silos and technology solutions such as ERP, CRM, e-commerce solutions.

So, making sense of the data is possible with the right CDP.

“ Over the past 12 months, we’ve seen our customers get smarter about which data is collected, a reflection of the economic circumstances businesses now find themselves in.

”

This is the sign of
the times...

...cookies, going-
going...gone.

**And so the game has
changed from “Grab
ALL the data”....**

A person's hand is shown holding a smartphone. The background is a blurred city street at night with warm, bokeh lights. Floating around the phone are several social media icons: blue thumbs-up icons and red heart icons. In the top right corner, there are four large, dark blue circles arranged in a 2x2 grid.

...to a focus on identifying **quality data** that can be employed in our marketing strategies.

**So, how can you use the
customer data you have to
the fullest?**

3 secret ingredients
3 secret ingredients
3 secret ingredients

**Zero- and first-
party data**

THE GYM SHOES YOU LIKED IN OUR SURVEY ARE ON SALE.

- GREAT.

ZERO PARTY DATA

THE GYM SHOES YOU BROWSED LAST YEAR ARE ON SALE.

- UM, OK.

FIRST PARTY DATA

I HEAR YOU HAVE A NEW GYM MEMBERSHIP. NEED ANY SHOES?

- WAIT, WHAT?

SECOND PARTY DATA

MAYBE YOU WOULDN'T HAVE SKIPPED YOUR WORKOUT TODAY IF YOU HAD NEW SHOES.

TOM FISH BURNE

THIRD PARTY DATA

“ By leveraging Twilio Segment and our first-party data, we’ve seen a **20% decrease in our customer acquisition cost and an 11% increase in our return on ad spend** on Facebook ads. ”

– Max Lagresle
Associate Director of Digital
at Veronica Beard

VERONICA BEARD

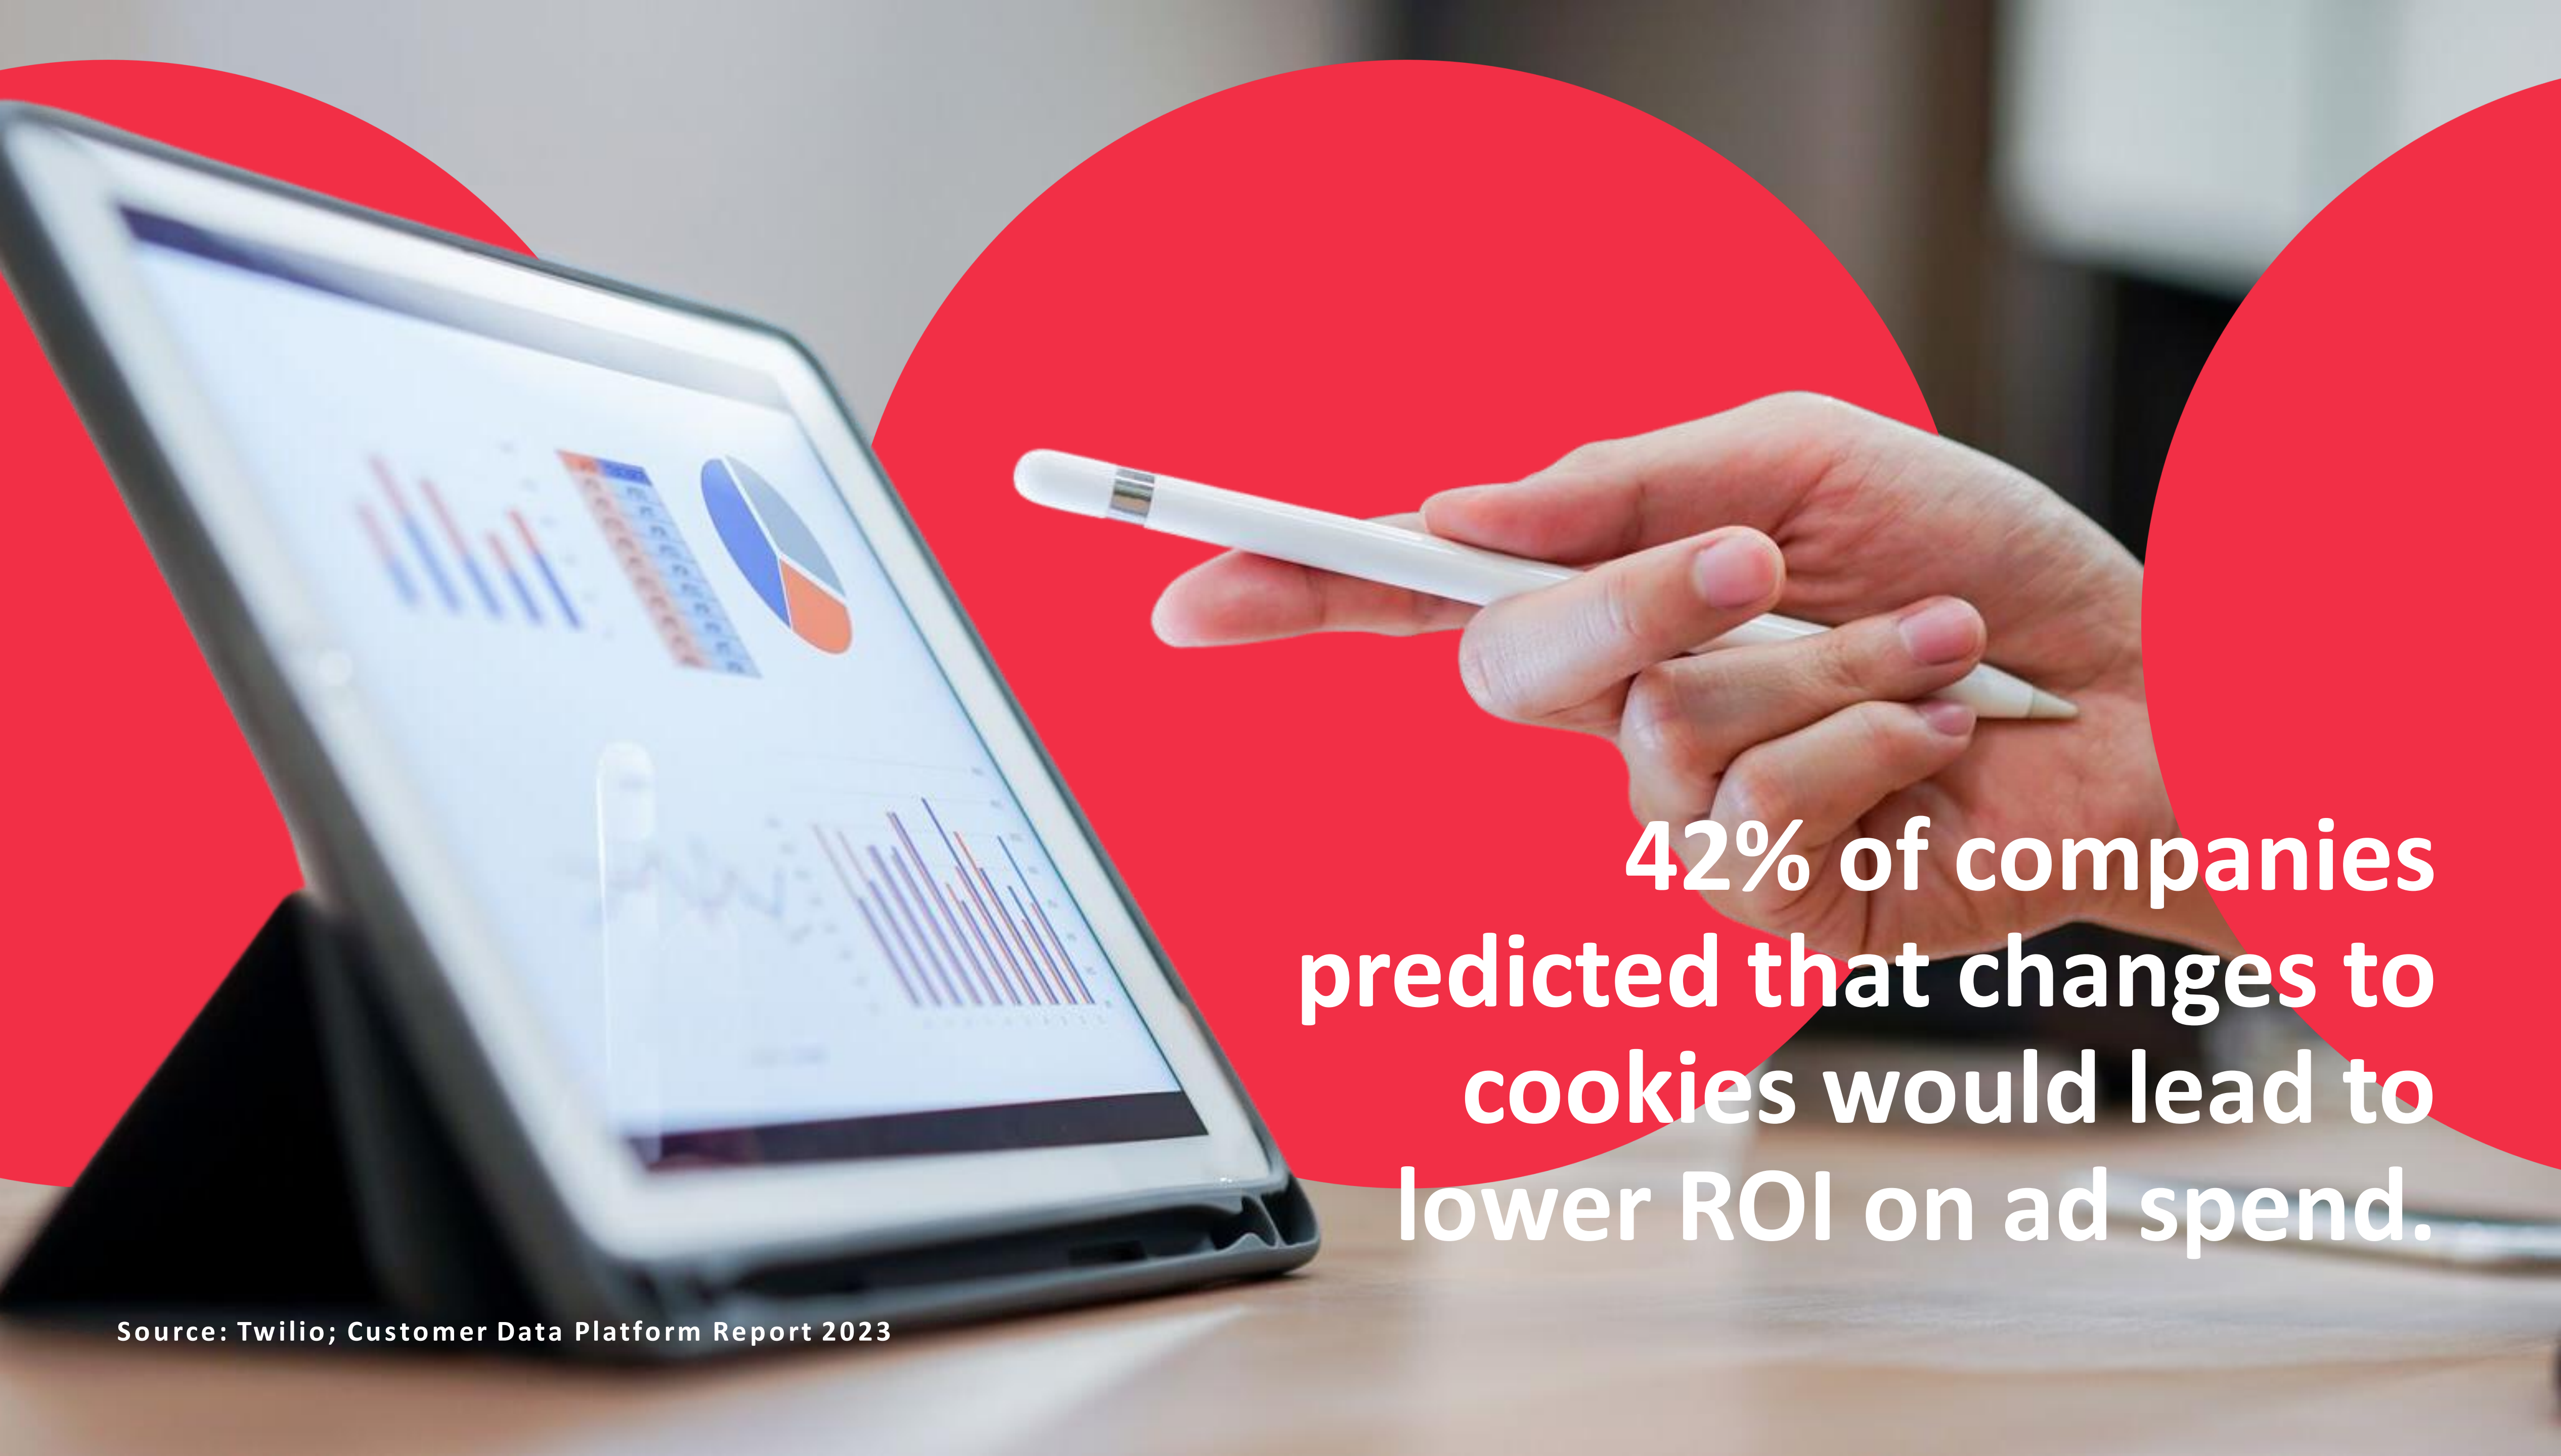

**Rethink your
attribution model**

In the cookie-less future, how brands measure the impact of their marketing spend is going to change.

42% of companies predicted that changes to cookies would lead to lower ROI on ad spend.

Well, we just proved that wrong.

But SINCE third-party cookies are required for multi-touch attribution models...

...there is a reasonable concern about how to measure the full customer journey once cookies are history.

**I have some advice on this one:
make the switch from client-side
tracking to server-side tracking. You'll
be less reliant on third parties like
Google.**

**Breaking your
enterprise's addiction to
cookies means...**

**...you'll have more control
over your data, be able to
track customer behaviours
reliably.**

**And you won't have to
worry about missing
third-party data
whenever that day
arrives.**

Amaysim,
a low-cost mobile
service provider
here in Australia, is a
textbook example of
improved data
governance in
action....

They've used Twilio's single, unified view of the customer and automation to create a **better experience.**

The results:

4x ROI

90% of marketing campaigns are automated

5% reduction in marketing spend

**Expand Data
Warehouses**

Cloud warehouses are on the rise, helping businesses flexibly store their data.

**But without a CDP,
non-technical teams
are forced to rely on
data engineering
teams to access and
use the data.**

**Sounds to me like
that defeats the
purpose.**

**So, my third ingredient is to
expand data warehouses
into customer engagement.**

53% of Twilio Segment customers now connect to a warehouse destination.

Source: Twilio; Customer Data Platform Report 2023

So, it's the right time to make data access a priority, so you can **get ahead of your competitors.**

So there you have it:
the recipe for success in a
cookieless world.

**Zero- and first-
party data**

**Rethink your
attribution
models**

**Expand your data
warehouses into
customer
engagement**

Thank you.
